Technical writers and corporate communicators are professionals whose field and work is documentation. Ideally, technical writers have a background in both the subject matter and also in writing and managing content (information architecture). Technical writers more commonly collaborate with subject matter experts (SMEs), such as engineers, technical experts, medical professionals, or other types of clients to define and then create content (documentation) that meets the user's needs. Corporate communications includes other types of written documentation that is required for most companies.

Specializing documentation[edit]

- Marketing Communications (MarCom): MarCom writers endeavor to convey the company's value proposition through a variety of print, electronic, and social media. This area of corporate writing is often engaged in responding to proposals.
- Technical Communication (TechCom): Technical writers document a company's product or service. Technical publication include user guides, installation an configuration manuals, and troubleshooting/repair/replace procedures.
- Legal Writing: This type of documentation is often prepared by attorneys or paralegals who could be in private practice or retained as corporate council.
- Compliance documentation: This type of documentation codifies Standard Operating Procedures (SOPs), for any regulatory compliance needs, as for safety approval, taxation, financing, technical approval, etc.
